Rely on Rockland  
for Unparalleled Quality

## Diagnostic: Overview

For over 50 years Rockland has provided a dedicated portfolio of general purpose reagents (GPR) used to collect, prepare, and examine specimens for a broad range of diagnostic applications. These include anti red-blood cell antibodies, secondary conjugated/unconjugated antibodies, gamma globulins, buffers, stabilizers, diluents and substrates. Similarly, Rockland has produced and validated monoclonal (MABs) antibodies against biomarker proteins that can be used as analyte specific reagents (ASR) and are available for licensing. Areas of research include cancer, apoptosis, neurobiology, immunology, cardiovascular disease, infectious diseases and epigenetics.

All IVD raw materials and reagents are produced and manufactured following Rockland's strict quality system and can be further modified to meet specific product and quality needs that clients require.
