

MS Validated Antibodies

All MSVA antibodies are validated
on 76 different normal human tissues
by IHC

MS Validated Antibodies

**Large-scale tissue-validated antibodies specifically designed
for immunohistochemistry on formalin-fixed tissue**

Analyzing all human normal tissue types allows the testing of all human proteins and their post-translational modifications for cross-reactivity

Highly selective validation pipeline: Only 175 of 7,000 antibodies have passed testing so far and were selected for the MSVA portfolio

Unique antibody documentation on the MSVA website with 60-100 images of relevant normal tissues and selected tumours

Documented performance characteristics of many antibodies in studies involving more than 10,000 tumours
